

Expanding to meet your needs...

Salem Clinic is expanding in order to better meet the needs of our patients and community. In **June of 2009** we will open the doors to our new center which will house all of our laboratory and radiology services, as well as a new same day appointment/urgent care clinic. The center will be accessible from within our existing Clinic on Capitol Street, as well as from a new entrance off Erixon Street to the south.

We have listened to the needs of our patients and have taken special care to address those needs in our new space.

In regard to medical services, we will offer:

- Easier access to same day medical care through our new **Same Day Care Clinic**.
- An enhanced breast imaging center, including **digital mammography**, ultrasound and biopsy capabilities
- Updated diagnostic imaging equipment, including a new x-ray machine and a new **CT** scanner
- New diagnostic imaging capabilities, including an **MRI** scanner
- An **electronic health record**, so that your healthcare providers have your pertinent health information at their fingertips
- A new **PACS** (picture archiving communication system) will allow our medical providers to view your radiologic studies on their desktops and in your exam rooms.

In regard to the facility, there will be expanded parking, additional and larger restrooms, light food service and more.

The addition of this center will also allow more space for the growth of our **OB/GYN** department; completion of this phase is expected by September of 2009.
