

CT SCAN

What is CT?

Computed Tomography (CT), commonly called CT or CAT scan, is the process of using x-rays to make an image of the body.

Is CT safe?

Although CT uses radiation you do not need to be concerned. All modern technology minimizes the amount of radiation during scanning while providing the benefit of a more accurate diagnosis.

- If you are pregnant, or think you might be, be sure to tell your doctor so the best decisions can be made regarding your care.
- If you have history of an allergy to iodine, contrast, or x-ray dye, please inform your doctor before you have your CT examination.

Let your CT technologist know before the examination begins if you have not discussed your chance of pregnancy or allergies with your physician.

How to prepare for a CT examination:

If your examination requires the use of a contrast agent (a liquid “dye” injected into the vein) you should not eat anything for 2 hours before the examination. Clear liquids are okay to have before your appointment. You will be notified at the time of scheduling if you need to fast. Usual medication can be taken unless noted by your physician. For your examination, you may be asked to wear a gown and remove any items that may interfere with the examination.

Your examination may require you to drink an oral contrast agent to opacity the bowel. You will be given this after you check-in for your appointment. Expect this portion to take 45 minutes-1 hour to complete before your scan starts.

What happens during a CT examination?

- You will be positioned on the CT table so that the area of your body being studied can be best imaged as it moves through the scanner (a large donut-like machine).
- The examination itself usually takes ten minutes.
- If contrast is used, the technologist will start an IV. You may feel a warm sensation as the contrast is injected; this will last a few minutes.
- While the technologist is in the next room operating the machine, you, the patient is in constant view and within hearing distance.
- After the examination, the images will be reviewed to ensure that the desired information has been obtained. In some instances, additional images may be required; this could be either while you are still here on the table or on another day after a formal interpretation has been done by a radiologist.

After the CT examination:

You can resume normal activities unless otherwise advised by your doctor. Following examinations using contrast, it is best to drink plenty of fluids to help eliminate the contrast from your body. If you are taking certain diabetic medications, you will receive proper instructions immediately after your CT scan to stop such meds, however, do not hesitate to call your physician if you have further questions or do not hear back from him/her regarding resuming your medication.

How will I know the results?

An interpreted report by a specialist will be sent to your physician. Your physician will contact you in the normal way they usually contact you with test results. Please let the technologist know of where your last MRI was performed, this can help assist them in finding any previous studies if needed.

If you have any questions, you may call the Radiology Department directly at 503-399-2484. Option #1

Your appointment is at:

2020 Capitol St NE Salem, OR 97301

Date: _____

Time: _____ **PM**
AM

Please call ahead if you cannot keep your appointment 503-399-2484. Option #1

Patient Preparation

Preparation must be completed properly or exam will be rescheduled to the next available appointment

- Clear liquids only 2 hours before the examination. No solid food. You may take your normal medications.

- No prep necessary.

- Upon arrival you will be drinking contrast for certain exams, each wait time is exam specific, please be prepared to wait 45-60 minutes before your table time.
